

Tutorial 3

Work in the same teams as tutorial 2 and look at your use case diagram again. Write down use case details for three of the use cases that you discovered. You will have to take on the roles of the subject matter experts again and make sensible assumptions when working out the details. Describe the reasons for your decisions in the rationale section of each use case.

Newsagents plan to use a highly sophisticated computer system to make sure that the papers get delivered each day. The system should be able to cope with the needs of both the paperboy and the newsagent. Each morning the paperboy (or girl) receives a list of all the houses on his run, together with the papers and magazines that he must deliver. He also gets a list of totals so that he can just collect the required totals of each of the various papers and then make up his run. The newsagent, on the other hand, will be able to enter new orders for papers, record complaints and temporary changes, and be able to calculate the boys' pay, based on the going rate, minus deductions based on mistakes. The newsagent will also be able to take orders for a large range of magazines and calculate daily totals for all the different publications.
